Mane Meals

The Everyday Edition

Welcome to Mane Meals

Eating to support your hair doesn't have to mean buying expensive superfoods, following a strict meal plan, or making something different every day.

Mane Meals: The Everyday Edition brings together 21 meal and snack ideas that provide nutrients important for healthy hair.

You'll find meals for busy mornings, quick lunches, and evenings when you barely feel like cooking. Many use the same ingredients in different ways, showing you how to add variety to your meals without needing a completely different set of groceries each week.

The goal isn't to follow every meal exactly. It's to give you ideas you can come back to, adapt, and make your own.

HOW TO USE THIS GUIDE

Make It Work for You

There's no schedule to follow and no particular order to eat these meals.

01

Choose what fits your day.

Some meals come together in minutes. Others need a little more preparation. Pick what works for your time, appetite, and energy.

02

Repeat what you enjoy.

You don't need 21 different meals and snacks every week. Find a few favorites and bring them into your regular rotation.

03

Use what you already have.

Many of these meals share ingredients, so you can use the same foods in different ways. Swap ingredients based on what you have available and what you like.

04

Make it your own.

These are meal ideas, not strict recipes. Adjust portions, seasonings, and ingredients to suit your needs.

You'll also see the nutrients highlighted under each meal, so you can recognize how everyday foods contribute to nourishing your hair.

PLEASE NOTE These meal ideas are meant to support your overall nutrition. They aren't intended to diagnose, treat, or reverse hair loss.

10 Nutrients That Support Healthy Hair

Your hair follicles need a steady supply of energy and nutrients to function properly. These 10 nutrients support different parts of that process, from building hair strands to maintaining healthy cells and scalp tissue.

Protein

Provides the amino acids needed to build keratin, the main protein in hair.

Carbohydrates

Supply energy that helps fuel your body's normal functions, including hair growth.

Iron

Helps carry oxygen throughout the body, including to tissues that support hair growth.

Zinc

Supports cell growth, tissue repair, and normal hair follicle function.

Vitamin D

Plays a role in hair follicle cycling and normal immune function.

Vitamin B12

Supports red blood cell production and DNA synthesis, both important for rapidly dividing cells, like hair.

Vitamin C

Supports collagen production and helps your body absorb iron from plant foods.

Biotin

Helps your body metabolize nutrients for energy and supports normal cell function.

Omega-3 Fatty Acids

Provide essential fats used in cell membranes and help regulate inflammatory processes.

Folate

Supports DNA synthesis and cell division, processes needed for normal hair follicle activity.

READING THE MEALS

Each meal is tagged with the nutrients it provides

The nutrients listed under each meal show what the foods can provide. The amount you get depends on how much you eat and the ingredients you use. These meals can help you get important nutrients, but they are not meant to treat or fix a nutrient deficiency.

● Protein

● Carbohydrates

● Iron

● Zinc

● Vitamin D

● Vitamin B12

● Vitamin C

● Biotin

● Omega-3

● Folate

Breakfast

For mornings when you're on the go

Strawberry Overnight Oats

Oats, Greek yogurt, fortified milk, strawberries, chia seeds, and walnuts.

● Protein ● Carbohydrates ● Vitamin D* ● Vitamin B12 ● Omega-3 (ALA)

Tropical Green Protein Smoothie

Fortified milk or soy milk, protein powder, frozen mango, pineapple, spinach, and ground flaxseed.

● Protein ● Carbohydrates ● Vitamin D* ● Vitamin C ● Omega-3 (ALA) ● Folate

Chicken thighs, sweet potatoes, and cauliflower.

● Protein ● Carbohydrates ● Zinc ● Vitamin B12 ● Vitamin C

Snacks

For when you need a snack between meals

Apple + Peanut Butter

● Protein ● Carbohydrates

Walnut, Cashew + Pumpkin Seed Trail Mix

● Protein ● Carbohydrates ● Zinc ● Omega-3 (ALA)

Hummus + Vegetable Sticks

Carrots, celery, and bell peppers.

● Protein ● Carbohydrates ● Iron ● Vitamin C

BEFORE YOU GO

Keep It Simple. Keep It Flexible.

Supporting your hair through nutrition isn't about eating perfectly or following a meal plan down to the last detail.

It's about finding ways to include nourishing foods consistently, in a way that works for your life.

Start with a few meals that sound good to you. Repeat them, change them up, and build a rotation you enjoy.

Small, consistent choices can help you build a stronger nutrition foundation over time.
